

Selenium WebDriver - a complete guide.

Program Content

I General Information

1. What is Selenium
2. Brief development history
3. How Selenium WebDriver works
4. W3C WebDriver standard
5. Comparison with competitors
6. Information sources

II Getting Started: an overview

1. Required infrastructure
2. Preparing the infrastructure for Java
3. Launching and stopping the browser
4. Opening pages and waiting for page load
5. Element locating on the page
6. Actions: click and sendKeys
7. Element properties: getText and getAttribute

III Browser Launching

1. Drivers
2. Choosing the "right" browser version
3. Launching on different operating systems
4. Capabilities
5. Cookies, clean and dirty launch
6. In-depth information about each browser (Chrome, Firefox, Internet Explorer, Edge, Safari, others)
7. Working with multiple browsers simultaneously
8. WebDriverFactory

IV Element Locating

1. Types of locators
2. Which locators are the best?
3. Locator debugging
4. Reliable and unreliable locators
5. Element lists
6. Locating elements within elements
7. Implicit waits
8. Page load waiting strategies
9. Locating elements using executeScript

V Retrieving Element Properties

1. Attributes and properties
2. Text
3. Visibility
4. Size and position
5. Styles

VI Element Actions

1. Simple
 - click
 - sendKeys
 - clear
 - submit
2. Complex
 - Mouse-hovering
 - Drag and drop
 - Right-click
 - Coordinate control
 - Modifiers (ctrl, shift)

VII Waits (WebDriverWait)

1. Waiting for element visibility
2. Waiting for element disappearance
3. Waiting for element properties
4. Waiting for a specific number of elements
5. Custom wait conditions
6. StaleElementReferenceException and dealing with it
7. Unsuccessful attempts as an alternative to waiting

VIII Windows and Dialogs

1. Alerts
2. Uploading files
3. Downloading files
4. Windows and tabs
5. Frames

IX Remote Execution

1. Selenium Server
2. Selenium Grid
3. Selenium Grid Extras
4. Cloud services

X Logging

1. EventFiringWebDriver
2. Accessing browser logs
3. Taking screenshots
4. Recording videos
5. Recording traffic

XI PageObjects and Other Design Patterns

1. The origin of this design pattern
2. Separation of concerns in tests
3. Various implementations of PageObjects
4. Alternative design patterns (PageBocks, Services)

XII Extensions and Wrappers

1. Drivers (Appium, Winium, Windows Application Driver)
2. Alternative APIs (Watir, Selenide, FluentSelenium)
3. BDD and other alternative styles (RobotFramework, Serenity, Capybara, Geb, ScalaTest)
